SUMMARY

AI Engineer with an M.S. in Applied Data Science and hands-on experience building and deploying LLM-powered, agentic AI systems: RAG pipelines on FAISS vector databases, LLM agent tooling with multi-step reasoning and tool use, and low-latency inference on AWS. Python and C/C++ with PyTorch, TensorFlow, Hugging Face, Docker, and CI/CD.

TECHNICAL SKILLS

Programming: Python, C/C++, R, SQL.

AI/ML & LLMs: Large Language Models, Transformers, Retrieval-Augmented Generation (RAG), prompt engineering, embeddings, NLP, model evaluation, deep learning, statistical modeling.

Agentic AI: LLM agent pipelines, tool use, multi-step reasoning loops, conversational AI orchestration, Hugging Face Transformers.

Frameworks: PyTorch, TensorFlow, Hugging Face, JAX, Scikit-Learn, XGBoost, Pandas, NumPy, Streamlit, Flask.

Infrastructure & Data: Docker, Git, CI/CD, AWS (Lambda, S3, EC2, IAM), Azure, FAISS, MySQL, BigQuery, Spark, data pipelines.

EXPERIENCE

New York University Abu Dhabi (NYUAD)

May 2026 – Present

Biostatistician — Machine Learning, Python, R

Abu Dhabi, UAE

- Build Python pipelines for a multi-omics study of chronic stress, processing high-dimensional transcriptomic (RNA-seq) and metabolomic data across three adipose tissue types.
- Engineer reproducible preprocessing, QC, and normalization workflows; apply differential expression and multivariate statistical modeling to surface stress-induced molecular signatures.

Syracuse University School of Information Studies (iSchool)

Feb 2025 – Apr 2026

Research Analyst — LLMs, Agentic AI, RAG, Python, CI/CD

Syracuse, NY

- Designed and deployed end-to-end conversational AI systems powered by large language models, cutting response latency and lifting engagement 40% on a Contact Center AI research platform.
- Built retrieval-augmented generation (RAG) pipelines backed by a FAISS vector database, improving answer accuracy 80% and response coherence 35%.
- Developed LLM agent-assistance tooling that chained model calls with external tool use and multi-step reasoning to automate contact-center workflows.
- Integrated Hugging Face transformer models into Python services shipped via CI/CD pipelines; ran systematic retrieval and generation evaluation to drive model and prompt iteration.

Syracuse Center of Excellence in Environmental and Energy Systems

Jul 2023 – Dec 2024

Data Analyst & Communications — Data Engineering, Cloud

Syracuse, NY

- Designed cloud-based databases and automated data pipelines that cut reporting errors 30% and replaced manual reporting with automated dashboards for a cross-functional team.

Syracuse University School of Information Studies (iSchool)

Nov 2023 – Dec 2023

Graduate Research Assistant — NLP, Python, Machine Learning, AI Ethics

Syracuse, NY

- Built Python scraping pipelines and applied NLP models to large-scale conversational data, producing evidence for institutional strategy under responsible-AI and data ethics constraints.

DLithe

Jun 2020 – Jul 2020

Machine Learning Intern — Python, Selenium, Automation

India

- Built WhatsApp and Instagram chatbots on classification models (Decision Trees, Naïve Bayes, KNN, logistic regression); streamlined preprocessing of unstructured response data.

PROJECTS

Serverless Text-to-Speech Inference Service | AWS Lambda, Amazon Polly, IAM, Python

- Deployed a voicebot-ready TTS application on serverless AWS, exposing a low-latency inference endpoint and cutting end-to-end latency 30% via voice and output-encoding optimization.

Containerized Database System for Public Safety Operations | MySQL, Docker, Flask

- Designed and deployed a scalable relational database in Docker containers, improving data accessibility 40% and operational efficiency of reservation workflows 30%.

EDUCATION

Syracuse University — M.S., Applied Data Science

Syracuse, NY | Dec 2024

NMAM Institute of Technology — B.E., Computer Science and Engineering

Nitte, India | May 2021
