EXPERIENCE

Biostatistician | May 2026 - Present

Center for Brain and Health, New York University Abu Dhabi

Collaborate on a multi-omics study investigating molecular responses to chronic stress in adipose tissues. Perform metabolomics statistical analysis and interpret results related to metabolic pathways and circadian regulation. Use R for preprocessing, quality control, normalization, differential expression, and multivariate analyses. Research paper in progress.

Research Analyst | Feb 2025 - Apr 2026

School of Information Studies, Syracuse University

Designed conversational AI systems integrating retrieval-augmented generation (RAG), vector search, and large language models. Built AI pipelines with Python, Streamlit, and FAISS, and autonomous-agent workflows for question answering across structured and unstructured data. Optimized retrieval and inference pipelines and collaborated on reproducible AI workflows.

Data Analyst & Communications Intern | Jul 2023 - Dec 2024

Syracuse Center of Excellence in Environmental and Energy Systems

Analyzed institutional and research-partnership datasets to support evidence-based decisions. Designed relational databases and automated data pipelines. Developed interactive dashboards and visualizations for technical and non-technical stakeholders, and quantitative analyses to inform outreach and engagement.

Graduate Research Assistant | Nov 2023 - Dec 2023

School of Information Studies, Syracuse University

Conducted computational social-science research using web scraping and NLP to analyze online discourse on diversity, equity, inclusion, and accessibility. Built collection and preprocessing pipelines and studied linguistic patterns, conversational dynamics, and emerging themes.

Machine Learning Intern | Jun 2020 - Jul 2020

DLithe, India

Developed preprocessing, feature-engineering, and exploratory analysis workflows for conversational data. Built and evaluated supervised models including decision trees, Naive Bayes, K-nearest neighbors, and linear and logistic regression. Used classification metrics and cross-validation to compare performance.

Jovita Andrews

EDUCATION

MS, Applied Data Science | Jan 2023 - Dec 2024

Syracuse University, New York, US

GPA: 3.56. Merit scholarship recipient (10%). Coursework included applied machine learning, natural language processing, big data analytics, responsible AI, quantitative reasoning, and business analytics. Teaching Assistant for Prof. Alexander Deyhim, Invent@SU; volunteer with Syracuse Catholic Center and Romero Center Ministries.

BE, Computer Science and Engineering | Aug 2017 - May 2021

NMAM Institute of Technology, Mangalore, India

GPA: 3.33. Merit scholarship recipient (30%). Coursework included machine learning, big data analytics, Python, business intelligence, algorithms, and relational databases. Leadership included the Computer Society of India executive program committee, Incridea event coordination, and the Anti-Ragging Committee.

SELECTED PROJECTS

Text-to-Speech Converter |

Python, AWS Lambda, Amazon Polly, IAM

Developed a cloud-based speech-synthesis application using AWS Lambda and Amazon Polly, with scalable serverless deployment and latency optimization.

Job Recommendation System |

Machine learning, MSSQL, JavaScript, React

Built a system for personalized job matching using user profiles and predictive analytics, with iterative model evaluation and feature optimization.

Database Conceptualization for DPS |

Flask, Figma, MySQL

Designed and implemented a relational database system with scalable schemas for data organization, accessibility, and operational efficiency.

TECHNICAL SKILLS

Programming: Python, R, SQL, C/C++, JavaScript.

AI & machine learning: Generative AI, conversational AI, RAG, prompt engineering, supervised learning, predictive modeling, feature engineering, model evaluation, Scikit-learn, TensorFlow, PyTorch, XGBoost.

Data & research: Statistical analysis, exploratory data analysis, classification, regression, experimental design, scientific reporting, AI ethics, Pandas, NumPy, BigQuery, Tableau, Power BI.

Cloud & engineering: AWS (Lambda, S3, EC2, IAM), Azure, Git, CI/CD, Docker, relational databases, data warehousing, data pipelines, ETL, database design.
